YEAR THREE MATHS OVERVIEW

Number and place value	Addition and subtraction	Multiplication and division	Fractions	Measurement	Geometry: properties of shapes	Statistics
Pupils should be taught to:	Pupils should be taught to:	Pupils should be taught to:	Pupils should be taught to:	Pupils should be taught to:	Pupils should be taught to:	Pupils should be taught to:
count from 0 in multiples of 4, 8, 50 and 100; find 10 or 100 more or less than a given number	add and subtract numbers mentally, including: - a three-digit number and ones - a three-digit number and tens - a three-digit number and	recall and use multiplication and division facts for the 3, 4 and 8 multiplication tables	Icount up and down in tenths; recognise that tenths arise from dividing an object into 10 equal parts and in dividing one-digit numbers or quantities by 10	measure, compare, add and subtract: lengths (m/cm/mm); mass (kg/g); volume/capacity (I/mI)	draw 2-D shapes and make 3-D shapes using modelling materials; recognise 3-D shapes in different orientations and describe them	interpret and present data using bar charts, pictograms and tables
recognise the place value of each digit in a three-digit number (hundreds, tens, ones)	hundreds add and subtract numbers with	write and calculate mathematical statements for multiplication and division using the multiplication tables that they	recognise, find and write fractions of a discrete set of objects: unit fractions and non-unit fractions	measure the perimeter of simple 2-D shapes	recognise that angles are a property of shape or a	solve one-step and two-step questions[for example, 'How many more?' and 'How many fewer?'] using information
compare and order numbers up to 1000	up to three digits, using formal written methods of columnar addition and subtraction	know, including for two-digit numbers times one-digit numbers, using mental and	with small denominators recognise and use fractions as numbers: unit fractions and	add and subtract amounts of money to give change, using both £ and p in practical	description of a turn identify right angles, recognise that	presented in scaled bar charts and pictograms and tables
identify, represent and estimate numbers using different representations	estimate the answer to a calculation and use inverse operations to check answers	progressing to formal written methods Psolve problems, including missing	non-unit fractions with small denominators recognise and show, using diagrams, equivalent fractions	tell and write the time from an analogue clock, including using	two right angles make a half- turn, three make three quarters of a turn and four a complete turn; identify whether angles	
read and write numbers up to 1000 in numerals and in words	Solve problems, including missing number problems, using	number problems, involving multiplication and division, including positive integer scaling	with small denominators add and subtract fractions with the same denominator within one	Roman numerals from I to XII, and 12-hour and 24-hour clocks	are greater than or less than a right angle	
solve number problems and practical problems involving these ideas	number facts, place value, and more complex addition and subtraction	problems and correspondence problems in which n objects are connected to m objects	whole (for example, \(\frac{5}{7} + \frac{1}{7} = \\ \frac{6}{7} \) compare and order unit fractions, and fractions with the same denominators solve problems that involve all of the above	estimate and read time with increasing accuracy to the nearest minute; record and compare time in terms of seconds, minutes and hours; use vocabulary such as o'clock, a.m./p.m., morning, afternoon, noon and midnight	identify horizontal and vertical lines and pairs of perpendicular and parallel lines	
				know the number of seconds in a minute and the number of days in each month, year and leap year		
				Procompare durations of events [for example to calculate the time taken by particular events or tasks]
